[illegible]

START

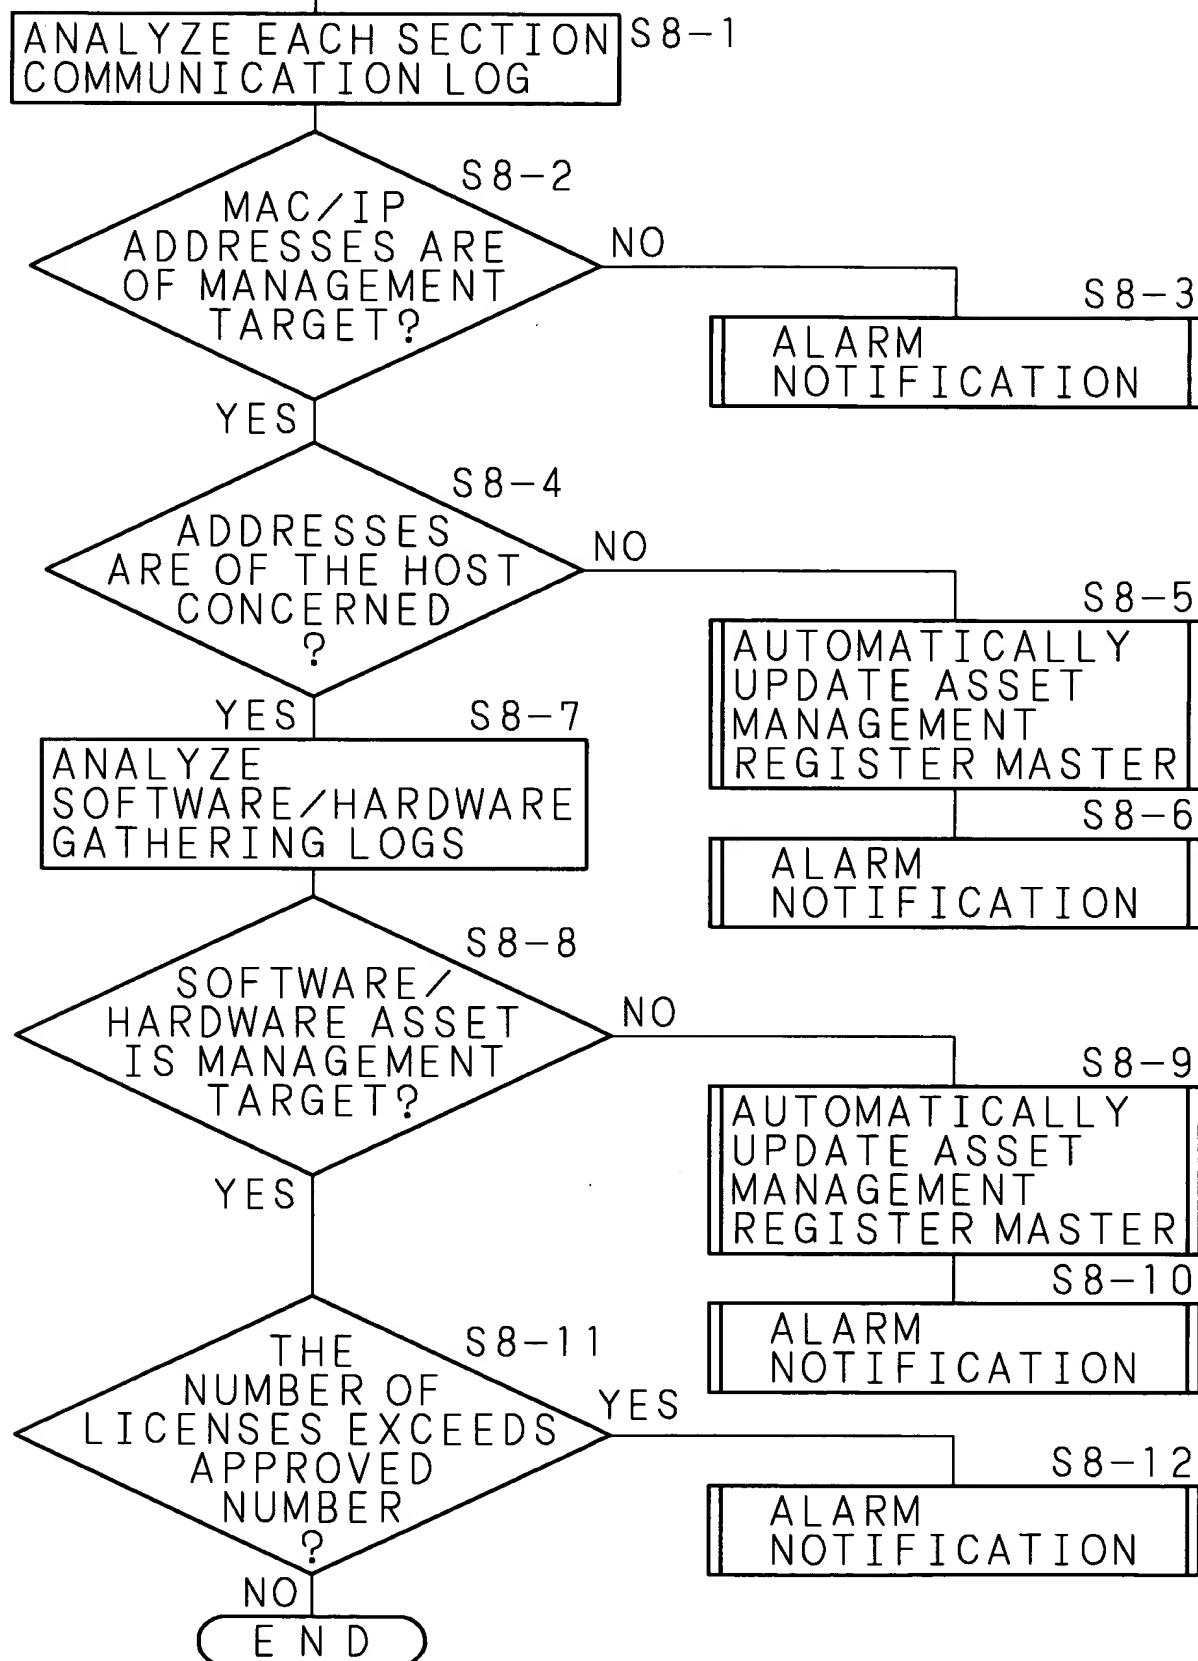

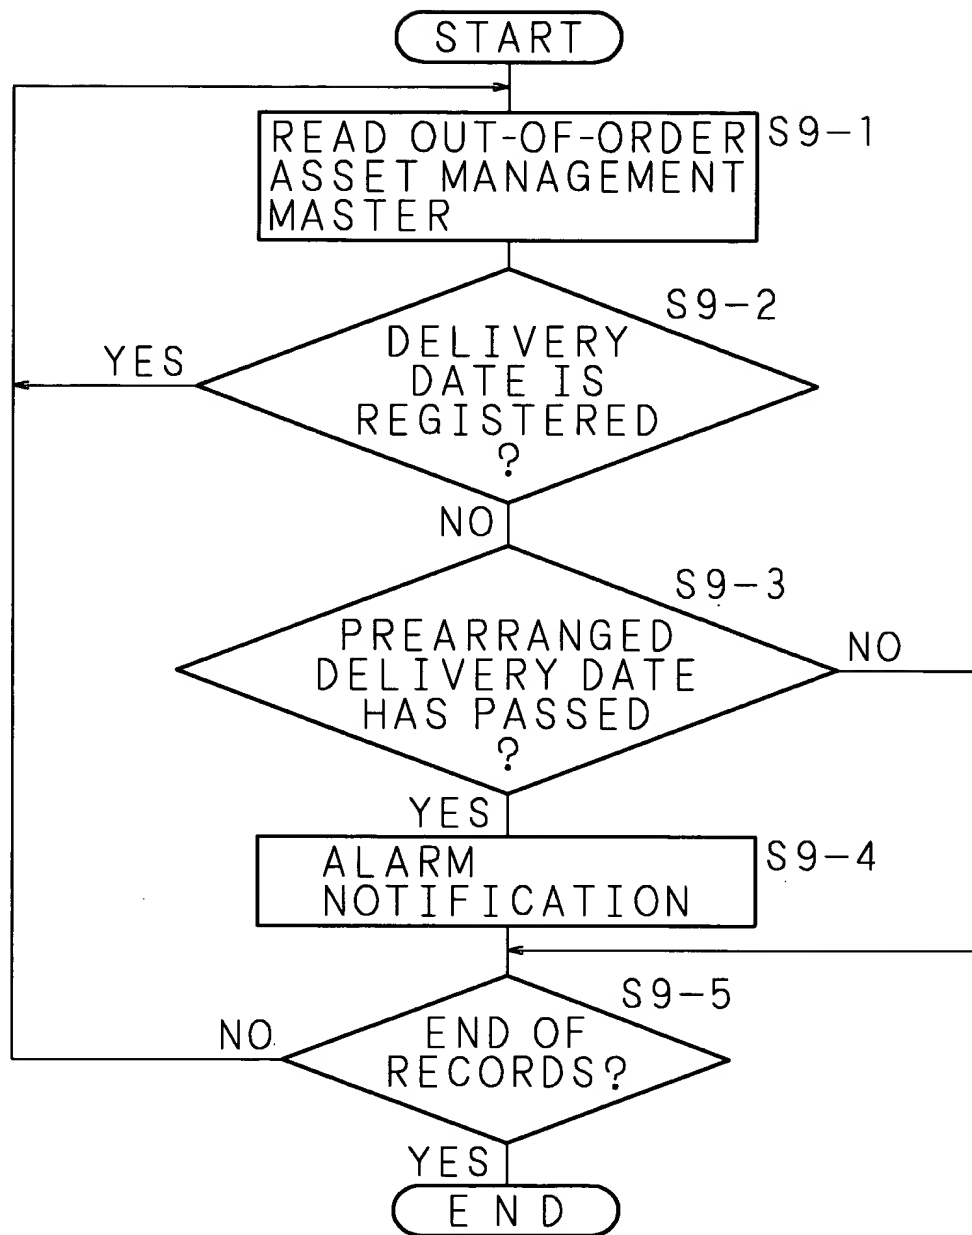

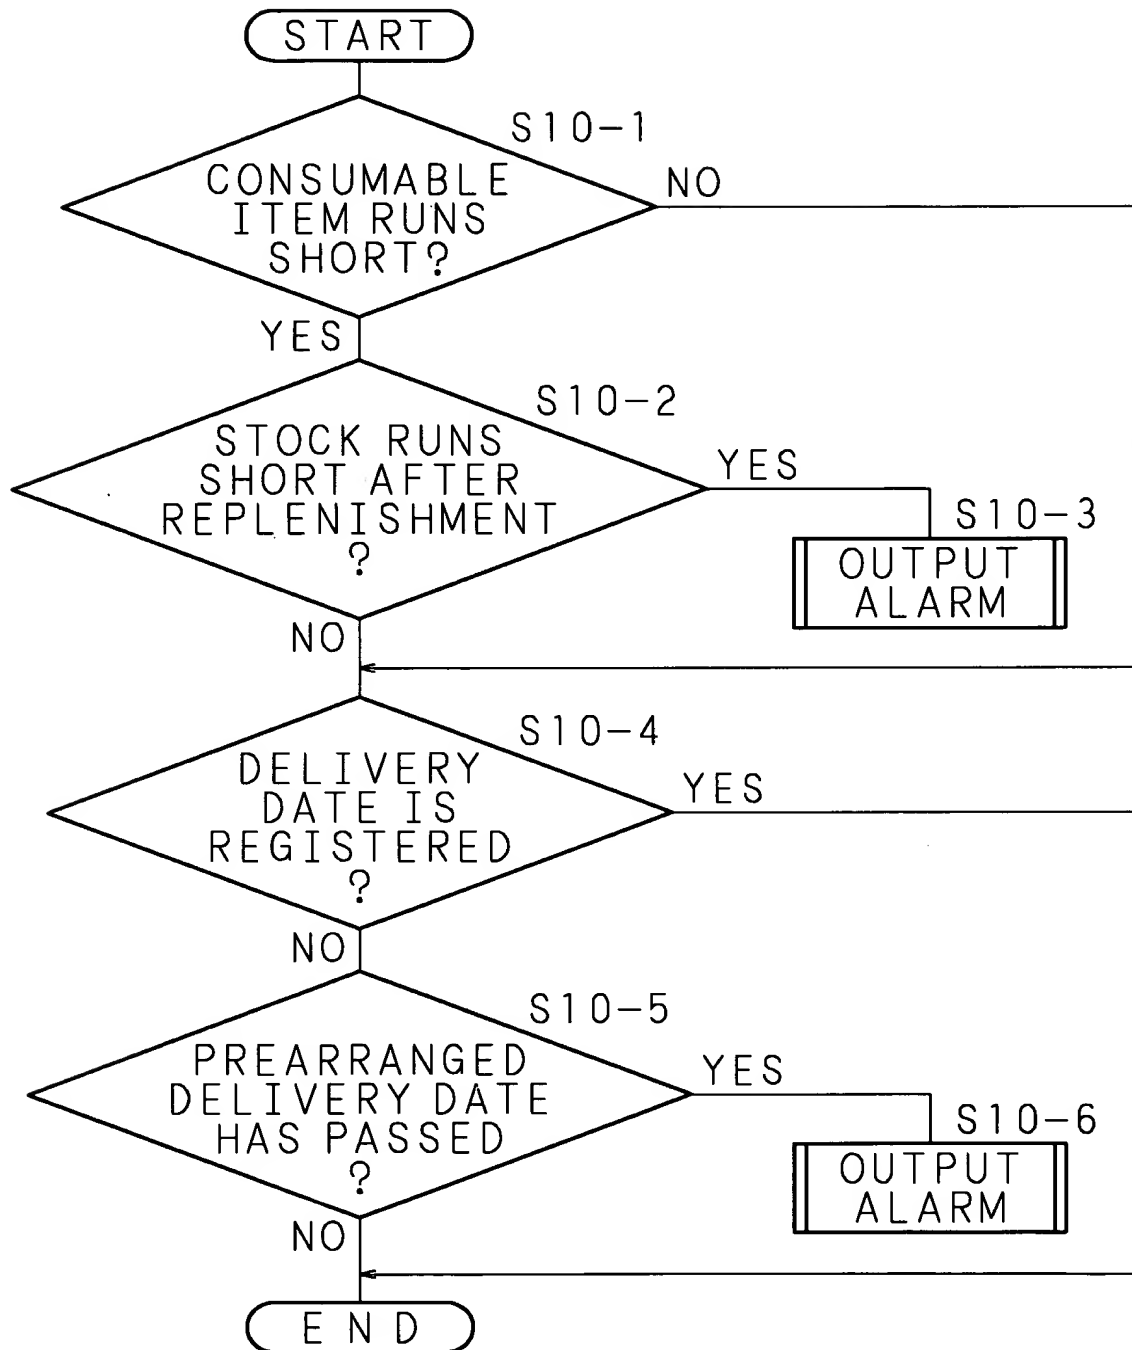

[illegible]

Figure 1 consists of 12 micrographs arranged in a vertical column, labeled 'a' through 'l'. Each micrograph shows a different stage of embryonic development. The sequence begins with a single cell (a) and shows the progression through various cleavage stages, including two-cell, four-cell, and morula stages, eventually leading to a fully formed embryo (l). Each micrograph includes a scale bar at the bottom right, indicating a length of 10 micrometers.

The figure consists of 12 sub-diagrams labeled (a) through (l), arranged vertically. Each diagram shows a different stage in the construction of a 3D model of a human head and neck. The models are shown in profile, facing right. The components are labeled with letters and numbers. The sequence starts with a basic outline (a) and gradually adds more detail, including the jaw, teeth, tongue, and various anatomical structures like the larynx and trachea. The final model (l) is a complete, detailed 3D representation of the head and neck area.
